

Key Features

- A heavy duty custom sash and electronic hardware has been designed specifically for this Power STRUT Servery window.
- The sash opens and closes efficiently and quietly using plug and play electronic controls.
- The Power STRUT Servery can be fitted exclusively within both the 400 and 424 commercial framing.
- The sash is externally bead for both single and double glazed applications and features zinc die cast corner spigots for safety and durability.
- The external bead allows for easy access if a future glass replacement is required.
- Single Glazed up to 10.38mm and Double Glazed up to 24mm.
- In a weather protected area, the window can be fabricated without the use of window sill framing for a seamless integration with a benchtop running through the opening.
- Unlike any other servery style windows, the unit is designed to open, close and securely lock itself unassisted.
